Sign In and Print Badge

SUMMARY OF BENEFITS

- High quality badges are printed on any of the Brother QL range of label printers*, so your visitors receive a professional impression of your company upon arrival.
- Two modes of visitor data entry – reception mode for managed receptions, and self check-mode where the visitor enters their own information.
- Quick entry of visitor information, and immediate recall of visitor information for repeat visitors cuts down waiting times. See which visitors are currently signed-in, and print an emergency report if required, to assist in a roll-call of all visitors.
- Take the visitor's photograph with a webcam*, and print on the visitor badge for additional security.

The total visitor badge and management solution

The VM-100 visitor badge and management software is a total solution for registering visitors and contractors to your company, issuing high-quality printed visitor badges and the recording of visitor data for later analysis and reporting. With the VM-100 you receive: VM-100 Visitor Badge and Management Software, 2 x DK-55224 paper rolls (to print almost 700 badges), 12 x clip-on plastic badge holders and a handy roll storage box.

Works with any of the Brother QL range of Label Printers

This software is designed to work exclusively with any of the Brother QL range of label printers*, giving you the freedom to choose the printer that best meets your needs. In addition to printing the visitor badges, the versatile QL printer can also be used to create temporary signage and banners (for conferences, special meetings, product launches etc), and print address labels (so you can easily mail information to the visitors before they attend any meeting or conference).

Quick and easy to set-up and use

The software is easy to install and configure, and you can be up-and-running within minutes. VM-100 can be left running in the background of the receptionist's PC, available for use as soon as any visitor arrives. As all information is entered and displayed on one screen, entering the visitor's information, taking their photograph (if required) and printing a visitor badge takes just moments.

*Available separately – not included in VM-100

Sign-in visitors with or without a receptionist

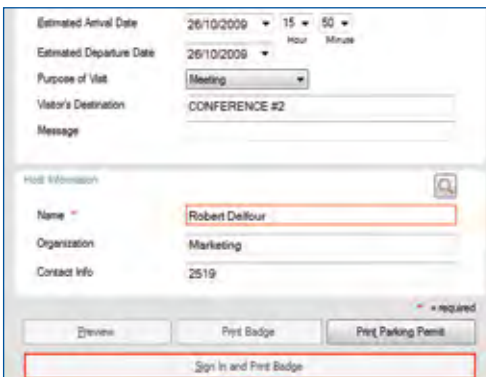

Reception Mode: Sign your visitors in/out quickly, and see who is still registered on-site

- All text entry fields and options are conveniently displayed on one screen.
- Pre-register visitors in advance to reduce their waiting time even further.
- Search through the host database to quickly find the telephone number of the visitors host to let them know their visitor has arrived.
- See an up-to-date list of signed-in, signed-out or pre-registered visitors.
- Quickly print visitor badges and parking permits.

Self Check-in Mode: Visitors sign themselves in and print their own visitor badges

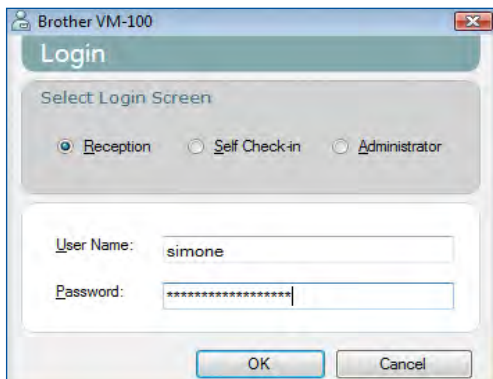

- Password protected, to stop visitors from tampering with the PC or changing settings.
- Simple step-by-step process for the visitor to enter in their information.
- Software runs full screen, with large easy-to-read fonts.
- As the visitor enters their details, a preview appears of their badge, and they can amend if needed before printing.

Quick sign-in: One-click printing of visitor and parking passes

- After entering all visitor information, quickly preview the visitor badge on-screen, print the badge without signing in, or print and sign-in the visitor in one step.
- A parking permit can also be printed, issued, and be given to any security personnel should the visitor need to access any secure areas.

Easy-to-use, secure and produces various reports whenever required

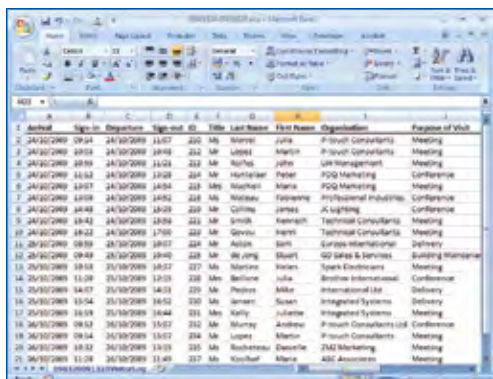

Password Protection: Prevents unauthorised access to data by requesting a username and password

- When the software is started, a username and password is required before access to the program and data is granted.
- Limited access can be set up with a “receptionist password”, that does not allow changes to the software to be made.
- The administrator password gives full access to all areas of the software, and allows full customisation and configuration as required.

Emergency report: Immediate printing of all visitors registered as “on-site” in the event of site evacuation

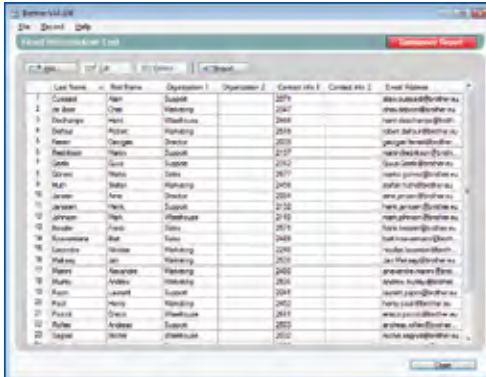

- A single click of the “Emergency Report” button will send a list of signed-in visitors to your default printer, and in addition show the list on-screen.
- The button is always displayed on the receptionist’s screen, instantly available when required.
- Only the currently signed-in visitors will be printed, making the roll call procedure quick and efficient.

Detailed reporting: Export visitor data to a .csv file, for further analysis in Microsoft Excel®

- Export detailed information of visitors to a .csv file.
- This data can then be imported into Excel® or other spreadsheet programs for analysis.
- You are able to select the date range before exporting, so for example you can run the report on a monthly basis.

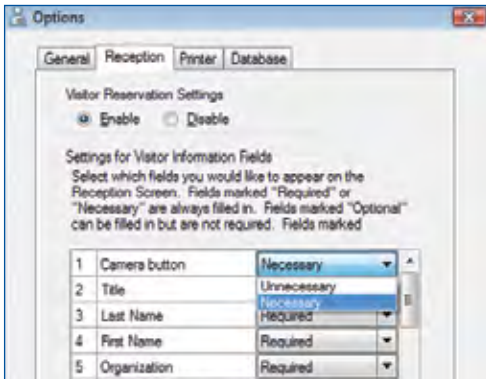

Configure the software how you need it

Host database: Employee details can be recalled instantly, making the sign-in process quick and efficient

- Details of employees are stored in the host database.
- As the receptionist types the host name, suggestions appear automatically, speeding up the sign-in process.
- Contact information such as telephone extension numbers and email addresses can be displayed to the receptionist, allowing them to contact the host and inform them their visitor has arrived.

Options

General Reception Printer Database

Visitor Reservation Settings

Enable Disable

Settings for Visitor Information Fields

Select which fields you would like to appear on the Reception Screen. Fields marked "Required" or "Necessary" are always filled in. Fields marked "Optional" can be filled in but are not required. Fields marked

1	Camera button	Necessary
2	Title	Unnecessary
3	Last Name	Necessary
4	First Name	Required
5	Organization	Required

Customise the software: Many of the options can be changed, depending on your requirements

- Select one of the many designs of visitor badge supplied, or create your own custom badge design.
- A company logo can be chosen, and printed on every visitor badge.
- Choose the text fields to be displayed on the visitor details input screen.
- Select the location of the automatic database backup. If required, visitor information can be deleted after a specified length of time (such as 6 months).

It's the fastest, easiest way to make professional badges for:

- Visitors to your office
- Trade shows
- School visitors
- Seminar and workshop attendees
- Part-time and temp workers
- Contract employees and vendors
- Parking permits
- School hall passes
- Event tickets / admission

And so much more!

Brother QL Series Label Printers

- Built-in cutter to automatically cut your visitor badges and parking passes to the correct size.
- Also perfect for creating temporary signs and banners for conferences and meetings.
- Print address labels for sending meeting information to delegates and visitors.
- Easy to replace rolls, with labels available in many different sizes, widths, colours and materials.
- Compact, ergonomic designs.

Look professional with a Brother label printer

The VM-100 uses one of the Brother QL range of label printers to print your visitor badges in seconds, with crisp sharp text on high quality paper. There are several models to choose from, each with various features. Some have network connections so the printer can be placed wherever it is required (away from the PC), while others can produce labels and signs up to 102mm wide.

All QL label printers have a built-in cutter so there is no need to use an awkward tear-bar after your badge or label is printed - simply remove from the catch tray at the front of the printer.

Many additional uses

The QL printer can be used for many other uses in the workplace, not just for printing visitor passes. Some typical applications for high quality labels include:

- Temporary indoor signs (such as for directions to a meeting room / exhibition stands / meeting table name plaques / food description labels for buffets, etc)
- Address labels (for mailing information to delegates and attendees before they attend the conference or meeting).
- General office labelling (file folders, CD/DVD discs and jewel cases, archive files, personal property, telephone extension lists)
